SUMMARY

Data Analyst with 2+ years building automated analytics pipelines, risk-scoring models, and KPI dashboards in insurance and warranty operations. Supported ₹200+ Cr AOP planning, built fraud-pattern tracing views across 2,174 dealers, and cut manual reporting effort by 90% through Python/SQL automation at Zopper. Skilled in Snowflake, Tableau (LOD, drill-downs, stories), and end-to-end ETL development.

SKILLS

Core Strengths: Claims Analytics, Loss-Ratio Analysis, Fraud Pattern Tracing, Customer Segmentation, Churn Analysis, KPI Design, Cohort Analysis, Process Automation

Languages & Querying: SQL (CTEs, Window Functions, Joins, Aggregations, KPI Logic), Python (Pandas, openpyxl, xlswriter, Data Cleaning, Feature Engineering, Automation)

Tools: Tableau (Dashboards, Drill-Downs, LOD Expressions, Calculated Fields, Stories), Snowflake, Advanced Excel, Google Sheets, Google Apps Script

Techniques: ETL Pipelines, Data Modeling, EDA, RFM Segmentation, Retention Analysis, Data Validation, Scenario Modeling, Dashboard Optimization

EXPERIENCE

Zopper | Jul 2024 - Present

Data Analyst | Noida

- Supported FY27 AOP projections using 3-year trend analysis and scenario modeling across channel, plan, and tenure dimensions — outputs directly informed ₹200+ Cr business planning decisions at senior leadership level.
- Built a weighted composite risk scoring model (0–100 percentile, 5 parameters) across ~1,210 dealers to identify closure candidates — delivered as a tiered Excel workbook with dashboard drill-downs and management PPT storytelling.
- Conducted channel-level loss-ratio analysis, segmented by plan type (EW, ADLD, Screen Protection) identified high-risk segments and produced targeted shutdown recommendations.
- Built Tableau views for service-center and store performance to trace fraud indicators such as abnormal claim frequency, repeated claim behavior, high-loss partners, and plan-level risk patterns.
- Designed 10+ Tableau dashboards with drill-down analysis, calculated fields, LOD expressions, dynamic filters, and KPI cards for leadership and business teams; improved dashboard performance by ~40% through SQL query tuning and optimized Snowflake summary tables.
- Reduced recurring manual reporting effort by ~90% by automating 20+ workflows using Python, Google Apps Script, Excel logic, validation checks, email alerts, and weekend-skip scheduling.
- Automated 50K+ monthly claims workflows using Python and SQL, achieving 99.8% accuracy and reducing end-to-end processing time by ~95%.

CoverYou Pvt. Ltd. | Jul 2023 - Jul 2024

MIS Executive -> Senior MIS Executive | Gurugram

- Built real-time MIS dashboards for business and operations teams, reducing recurring reporting effort by 90% and improving visibility into daily performance metrics.
- Automated incentive calculations for 90+ employees, improving calculation accuracy by 95% and reducing manual validation effort.
- Performed cohort analysis to identify retention drivers, contributing to an 8% improvement in retention through data-backed follow-up actions.
- Automated end-to-end reporting workflows across Excel and business reporting processes, reducing manual effort by 80%.

PROJECTS

Retail Customer Segmentation & Revenue Analytics | RFM Segmentation, SQL KPI Modeling, Tableau Revenue Dashboard

- Built an end-to-end retail analytics pipeline using UCI Online Retail data — Python data cleaning, SQL KPI logic, RFM segmentation, and Tableau dashboards analyzing £8.3M revenue, customer value segments, top products/markets, cancellation impact, and retention opportunities.

Customer Churn & Retention Analytics | Churn Feature Engineering, SQL Segmentation, Revenue-at-Risk Dashboard

- Built an end-to-end churn analytics pipeline using Telco customer data — Python feature engineering, SQL segmentation logic, and Tableau dashboards analyzing 7,043 customers, identifying 26.54% churn rate, quantifying £139K monthly revenue at risk, and recommending targeted retention actions.

India EV Adoption & State Growth Analytics | Public Data Analytics, SQL Growth Ranking, Tableau Market Dashboard

- Built an end-to-end EV adoption analytics project using public data.gov.in datasets — Python data preparation, SQL ranking and growth logic, and Tableau dashboards comparing 32.1L EV registrations, state-wise penetration, YoY growth, vehicle category mix, and high-opportunity markets.

Hospital Readmission & Patient Risk Analytics | Cohort Analytics, Risk-Band Scoring, Tableau Readmission Dashboard

- Built a healthcare readmission analytics project using UCI hospital encounter data — Python feature engineering, rule-based patient risk bands, SQL KPI logic, and Tableau dashboards analyzing 99,343 encounters, 69,990 patients, 11.39% early readmission rate, utilization patterns, and data-quality gaps.

EDUCATION

Indira Gandhi National Open University (IGNOU) | 2020 - 2023

Bachelor of Arts (Honours) | Delhi
